

# Using Communities to Highlight Scholarly Content in Hydra

*Four ways to discover one article!*

The diagram illustrates four distinct ways to discover a specific scholarly article within the Hydra digital repository system:

- Featured Content:** Shows the main landing page of the Digital Repository Service (DRS) at Northeastern University. It features a "Recently Added Items" section with thumbnail previews for "The crowd at President Freila's speech," "The birth of the sperm bank," and "Empty tables set up for the new...".
- Community Research:** Displays the "Research Publications" page for the "Department of Electrical and Computer Engineering". It shows a list of publications, including one by Anton L. Geiler titled "Alternating target laser ablation deposition of high quality barium hexaferrite thin films from barium monoferrite and hematite targets".
- Faculty Research:** Shows the "Research Publications" page for Anton L. Geiler. It highlights his publication "Alternating target laser ablation deposition of high quality barium hexaferrite thin films from barium monoferrite and hematite targets".
- And search:** Shows a search interface where the query "Alternating target laser ablati" is entered into the search bar, with the search button labeled "Search".

Arrows point from the "Community Research" and "Faculty Research" sections down to the "And search:" section, indicating that both community-based and faculty-specific research pages can be searched directly.
